Summary

AI Product Manager with 5+ years of progressive experience spanning software engineering, embedded product ownership, and end-to-end AI product development. Founder of Xenriq Systems, independently conceived, designed, built, and shipped 3 production AI products used by 800+ users across 60+ countries within weeks of launch, with zero paid acquisition. Deep hands-on expertise in generative AI, large language model product design, prompt engineering, retrieval-augmented generation architecture, model evaluation, human-in-the-loop systems, and voice AI. Combines a strong computer science foundation with OKR-driven roadmapping, data-driven decision-making, and a consistent track record of shipping measurable outcomes. Equally comfortable defining product strategy with senior stakeholders and reviewing system architecture with engineering teams.

Skills

AI and GenAI: Large Language Models, Prompt Engineering, Retrieval-Augmented Generation, Model Evaluation and QA, Human-in-the-Loop Design, AI Behaviour Definition, Multimodal AI, On-device AI Pipelines, Voice AI (STT/TTS), Screen-Aware AI

Product Management: Product Strategy, 0-to-1 Development, Roadmapping, OKRs and KPIs, PRDs and User Stories, Feature Prioritisation (RICE, MoSCoW), Jobs-to-Be-Done, Go-to-Market, A/B Testing, User Research, MVP Scoping, Agile and Scrum

Technical: System Design, REST APIs, SQL, Python, TypeScript, JavaScript, Electron, WebSockets, Git, Supabase, Chrome Extension APIs, VS Code Extension APIs, PCM Audio Streaming

Analytics: Mixpanel, Amplitude, Google Analytics, Funnel Analysis, Cohort Analysis, Data-Driven Prioritisation

Tools: Figma, Jira, Linear, Notion, Postman, GitHub

Experience

Next Square Technologies

Dec 2023 - Present

AI Product Manager

Gurugram, India

- Led end-to-end product discovery for an internal AI productivity platform targeting consulting and delivery teams: conducted 6 structured user interviews, mapped high-frequency manual workflows against AI suitability, and synthesised findings into an opportunity matrix that became the approved, prioritised product roadmap.
- Owned AI output quality standards for 3 core use cases (automated status reporting, SOP generation, and client documentation): engineered prompt templates, defined explicit pass/fail evaluation criteria, and reviewed 12 pre-launch output samples per use case, establishing a lightweight, repeatable model evaluation and QA process prior to go-live.
- Designed human-in-the-loop guardrails for compliance-sensitive content generation as an explicit product policy rather than a user-configurable setting, reducing compliance exposure and building measurable stakeholder trust before platform launch.
- Led cross-functional adoption rollout across 3 delivery teams post-launch; maintained a structured AI output failure log categorised by error type, which directly informed the v2 product backlog and secured senior leadership approval for the next product cycle.
- Collaborated with engineering on sprint planning, backlog refinement, and technical specifications; translated business requirements into development-ready PRDs with standardised acceptance criteria, reducing ambiguity between product and engineering teams.

Xenriq Systems - AI Product Studio

Jan 2024 - Present

Founder and AI Product Manager

Remote, India

Concurrent entrepreneurial engagement alongside full-time PM role. Independently conceived, built, and shipped 3 AI-native products from zero to production, all gaining organic global traction.

Promptive Sentry - Chrome Extension

- 500+ users, 60+ countries, 3 weeks post-launch -- chromewebstore.google.com
- Identified a high-friction gap in AI power-user workflows: professionals using Claude, ChatGPT, and Gemini lose context on every tab switch and restart from zero at every usage limit hit. Designed and shipped a dual-engine Chrome extension addressing this gap at the browser layer.
- Three core engines: (1) Prompt Enhancement Engine, one-click transforms vague prompts into structured, role-defined, constraint-aware AI instructions on Claude, ChatGPT, and Gemini; (2) Sentry Memory, saves full conversation context as an AI-readable structured handoff resumable on any platform instantly; (3) Claude Usage Monitor, real-time 5-hour and 7-day quota tracking. Privacy-first architecture, zero data retention, no account required.

Promptive Sentry for IDE - VS Code Extension

- 300+ active users, 1 week post-launch -- open-vsx.org/extension/xenriq/promptive-sentry-ide
- Solved the developer AI prompt quality problem at the IDE layer: prompts sent to AI coding tools are context-poor, generating generic responses requiring multiple iterations per session, compounding daily productivity cost for every developer using AI tools.
- Engineered a silent context collection pipeline capturing 7 IDE environment layers in under 800ms: current file and role, imports, open tabs, terminal errors, git history, diffs, and tech stack, automatically rewriting the developer prompt before the AI sees it. Zero setup, zero API keys, zero friction.

Pique - Windows Ambient AI Assistant

- Private Beta, Built and Shipping -- xenriq.com
- Single-hotkey ambient AI: captures screen in real time, understands context via multimodal AI pipeline, and responds by voice instantly with no window switching and no context loss. Key technical decisions: two-pass coordinate refinement engine, push-to-talk with under 200ms streaming transcription, full on-device HIPAA mode with zero cloud dependency, multi-model orchestration across Claude, Gemini, and GPT-4o. Built on Electron and TypeScript with WebSocket audio streaming.

Aithent Technologies*Senior Software Engineer**Dec 2022 - Sep 2023**Gurugram, India**Product-embedded engineering role, owned feature definition, model evaluation framework, and end-to-end execution for an LLM-powered intelligent search product.*

- Shipped LLM-assisted intelligent search feature end-to-end: reduced support ticket volume by 12% and increased self-service resolution rate by 10% within 90 days of launch, delivering directly measurable impact on support costs and user autonomy.
- Built a structured model evaluation framework from scratch using click-through rate, helpfulness ratings, and fallback frequency as primary quality signals; iterated on response grounding strategies and prompt structures based on real production data.
- Improved overall platform reliability by 22% through SLO definition, monitoring instrumentation, proactive alerting, and structured post-incident review processes; collaborated with product managers on PRDs and technical specifications.

Xoriant Solutions Pvt. Ltd.*Software Engineer**Nov 2021 - Dec 2022**Gurugram, India*

- Delivered an intelligent spending categorisation and automated trend analysis feature that reached 20% daily active users within 3 months of launch and became a top-3 engagement driver across the entire platform.
- Partnered with Product Managers on PRDs, user stories, and acceptance criteria across multiple sprint cycles; developed structured product intuition around prioritisation frameworks, effort sizing, trade-off analysis, and iterative release scoping.
- Built and maintained scalable backend services and data processing pipelines; contributed to API design and system architecture discussions, strengthening understanding of product-engineering interface decisions at scale.

Hexaware Technologies*Associate Software Engineer**Jun 2019 - Nov 2021**Gurugram, India*

- Synthesised user interviews, support ticket analysis, and NPS survey data into actionable backlog prioritisation inputs, contributing to a 20% improvement in CSAT scores across two consecutive product cycles.
- Designed and deployed real-time KPI dashboards using Java and SQL that became the primary operational monitoring tool for the delivery team, improving operational efficiency by 30% through faster anomaly detection and reduced manual reporting overhead.
- Developed early product thinking through direct involvement in user research synthesis, feature backlog discussions, and stakeholder feedback sessions alongside product managers, a foundation that shaped the transition into full product ownership.
